## Sprawozdanie z lab nr 3

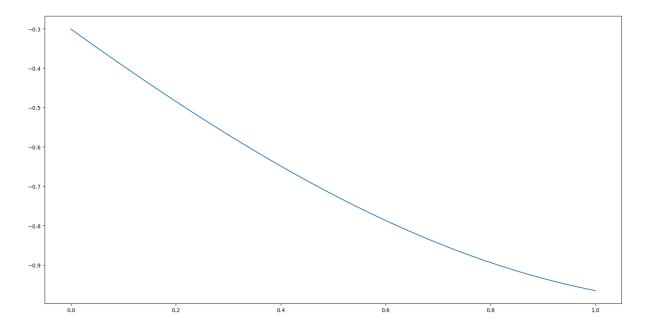

Dyskretna Transformata Fouriera

## Zadanie 1

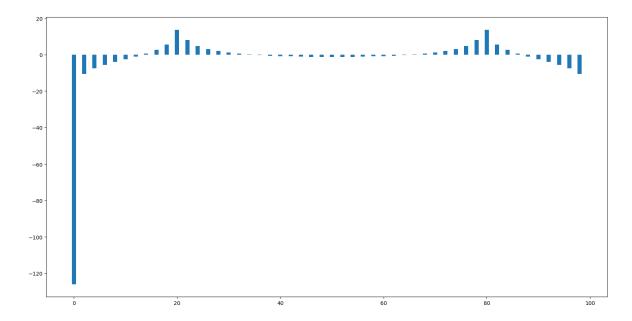

Napisz funkcję realizującą Dyskretną Transformatę Fouriera

## Zadanie 2

Wyznacz dyskretny sygnał tonu prostego

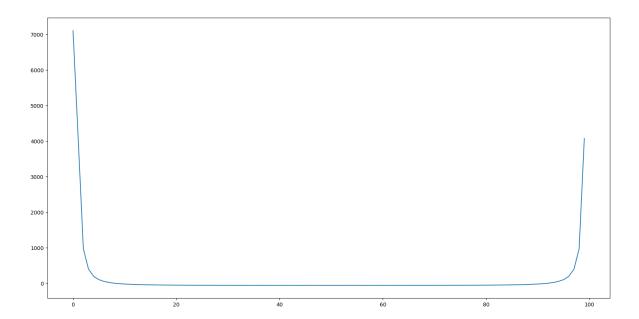

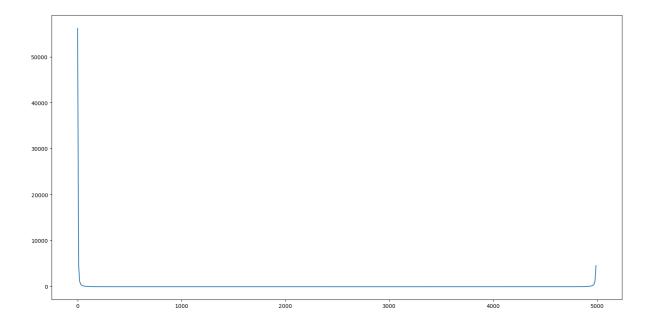

Wartość amplitudy widma w skali decybelowej

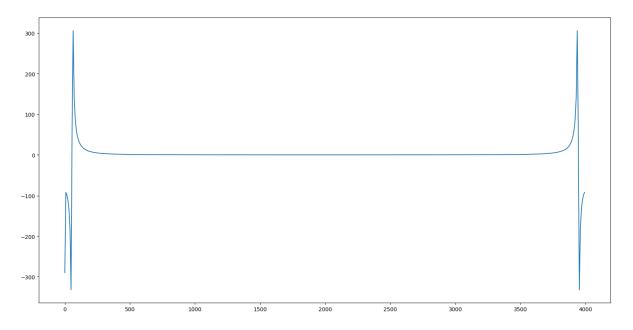

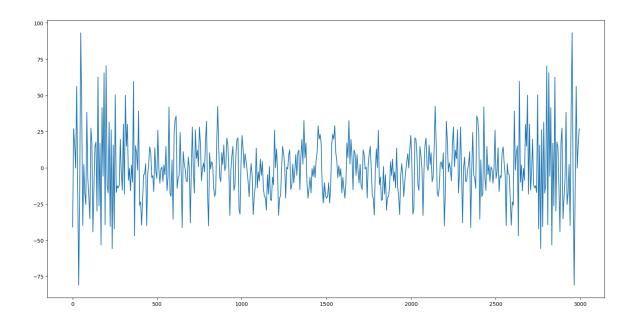

Zadanie 3

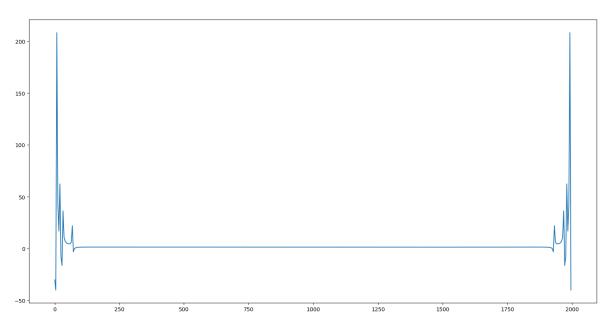

Dla sygnałów uzyskanych na pierwszych laboratoriach obliczyć widma amplitudowe.

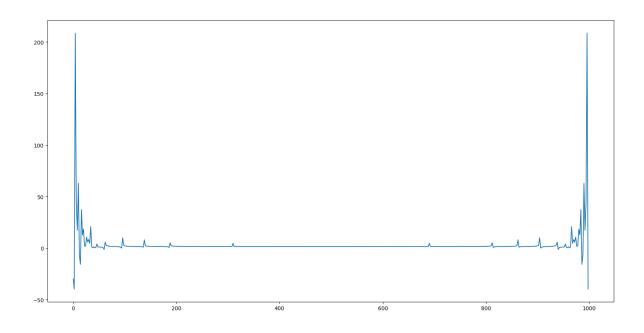

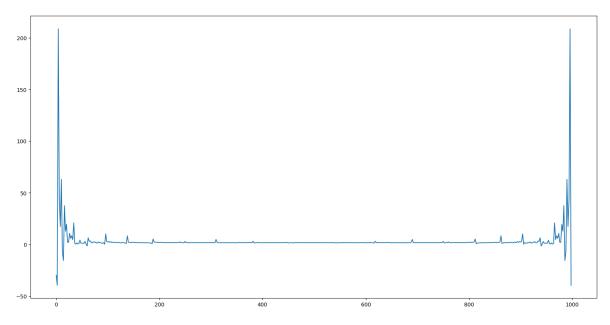

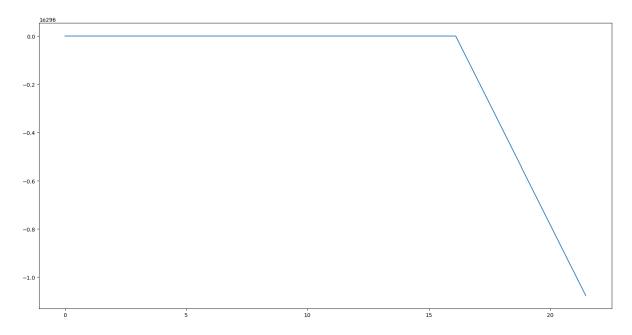

Zadanie 4

Odwrotna dyskretna transformata Fouriera

```
def IDFT(x):
    xk = []
    N = len(x)
    for k in range(N):
        sum = 0
        for n in range(N):
            wn = np.cos(x[n]) + n * np.sin(x[n])
            sum += 1/N + x[n] * wn**(k * n)
            xk.append(sum)
    return xk
```

(Wiem, że tutaj ewidentnie cos nie wyszło 😕)
